Modern EuroTech™ (Euro Technology) Wood with Exterior Aluminum Shield

Modern EuroTech™ (Euro Technology) is a one-of-a-kind construction that features a thermal insulated core, a thin layer of aluminum sheeting and plywood that is all sandwiched together and covered with your choice of European wood veneer. This design allows our doors to be extremely durable and thermally efficient. With the optional addition of a stainless-steel pull bar, you can get the ultimate modern look. This unique technology allows for your door to not only look great, but it will also last for years with minimal maintenance.

Euro Technology is a unique construction method that provides for some of the most durable, stable, thermally efficient doors on the market. The sandwich design consists of stiles and rails made from solid European wood, a thermal insulation board, and resilient layers of aluminum sheets and plywood, available in various wood veneers such as Mahogany. Put simply, our Euro Technology allows for your door to look better and last longer.

HINGES Available

Regular Hinge

Regular Hinge

Adhering to the highest standards, we exclusively use our own heavy duty ball bearing patina coated brass hinge with a steel pin. The weight of one hinge is 13 oz.

Architecturally proportioned, this 4" straight angle distinctive design boasts the finest quality.

Concealed Hinge

Concealed Hinge

Fully hidden and adjustable, the concealed hinge does its job so well that you will only notice that it is there to admire the technology. We use only the finest concealed hinges from Tectus, a german brand that produces some of the highest quality hinges in the world.

Pivot Hinge

Pivot Hinge

Pivot Doors revolve around a hinge that is offset from where a hinge would be on a traditional door. The craftsmanship and technology of a Pivot hinge allows for a larger opening than most other types of doors since traditional hinges cannot carry the same kind of weight.
